ASK YOUR DENTIST ABOUT A SHEER WHITE! SMILE

Patented SheerFilm Advanced Technology

Sheer White! uses specially patented SheerFilm® Advanced Technology that offers a remarkable, unique delivery system. Instead of a slimy consistency like most other brands, their gummy nature allows them to stretch and mold to the contours of your teeth, making them comfortable to wear, and keeping the strips in place through the duration of use. The snug fit allows the whitening agent to stay where it is intended to, up against the teeth, reducing the amount of product leaking into the sensitive areas of the mouth or up under the gum line that may cause a burning sensation.

Each whitening strip is identical in fit and size and can be used on either the top or bottom arch, making them very easy to use. The in-office booster strips are professionally placed in as little as one minute, and with 20% hydrogen peroxide, they provide a brighter smile up to 3 shades in as little as 30 minutes.

Following in-office application, Sheer White! take-home strips are worn once a day for 1–2 hours for 5 days. These maintenance strips contain 20% carbamide peroxide and will whiten up to 5 shades in 5 days.*

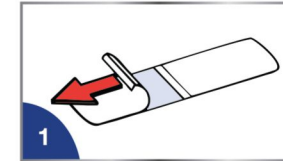

The sticky nature of the film allows the user to speak normally and even drink any cold beverage while wearing them. Because the whitening agent stays put and doesn't travel into the rest of the mouth it produces more precise results by eliminating the unwanted "zebra effect", and any sensitivity experienced with other teeth whitening products is typically eliminated with Sheer White!. Plus, the fresh peppermint flavor leaves a pleasant taste, enhancing the overall whitening experience.

Sheer White! strips are a phenomenal advancement in teeth whitening only found in dental offices because your dentist is your partner in creating a strong, happy, bright, and lifelong smile.

with Sheer White!**

Remove Foil From Tray

REMOVE

Remove strip as shown by peeling the backing off sticky side.

CENTER

Center sticky side of strip and place against teeth at gum line.

PRESS

Press firmly against teeth.

FOLD

Fold onto back side of teeth and continue pressing onto all surfaces.

WEAR

Wear from 1 to 2 hours.

REMOVE

Remove by using a tissue or napkin to grasp and pull strip from teeth. Brush or rinse any remaining residue into sink.

*For best results, use complete Sheer White! System, combining the in-office treatment with the take-home maintenance kit. Results may vary.
